- 1 11. (New) A method for manufacturing an ancillary used to remove bone,  
2 comprising the steps of:  
3 providing a body having the shape of an ancillary and comprising a  
4 plastic material, and  
5 exposing the plastic material to  $\beta$  or  $\gamma$  rays.

- 1 12. (New) The method of claim 11, further comprising the step of embedding  
2 at least one insert of a material harder than bone in the plastic material.
- 1 13. (New) The method of claim 12, wherein the at least one insert is fully  
2 embedded in the plastic material.
- 1 14. (New) An ancillary used to remove bone comprising a body of a plastic  
2 material, such that when said ancillary is put into an autoclave at 137°C,  
3 said ancillary deteriorates itself and cannot be used anymore.
- 1 15. (New) The ancillary as recited in claim 14, wherein said ancillary also  
2 comprises at least one insert of a material which is harder than bone, said  
3 at least one insert being at least partly embedded in said plastic material.
- 1 16. (New) The ancillary as defined in claim 15, wherein said at least one  
2 insert is fully embedded in said plastic material.
- 1 17. (New) The ancillary as defined in claim 15, wherein said at least one  
2 insert is a metal.
- 1 18. (New) The ancillary as defined in claim 16, wherein said at least one  
2 insert is a metal.
- 1 19. (New) The ancillary as defined in claim 14, wherein said ancillary  
2 comprises a part of a shape memory material harder than said plastic  
3 material.
